# **Title: Introduction to Science and Mathematics Education Research**

Credits: 4 (~44 hours, 2 contact session per week of 2 hours each) Instructors: KK Mashood, P K Joshi and Anisha Malhotra Dalvi Semester 1: January to April, 2022

# **Objectives of the Course:**

- 1. Understand broadly the motivation and rationale for research in science, technology and mathematics education (STME)
- 2. Introduction to research literature in science, technology and mathematics education
- 3. Exposure to research in science, technology and mathematics education at HBCSE
- 4. Introduction to some of the key themes and issues in science, technology and mathematics education research

## Learning goals:

- Foster ability to search and identify research materials in STME (journal articles, book chapters etc.)
- Develop capacity to critically read and analyse research papers in STME
- Inculcate capacity to discuss, engage in argumentation and make presentations of research papers in STME.
- Develop familiarity with key threads and themes in STME research and identify ones own areas of interest
- Cultivate ability to summarise arguments of research articles and eventually conduct literature reviews on chosen themes/topics in STME
- Develop skills to plan, design and conduct experiments for concept clarity of topics covered in regular syllabus/curriculum

# **Class Structure and Assessments:**

The course will cover a set of key themes in STME, which are mentioned below. Around two to three sessions will be devoted for discussing papers, chapters selected from each of the themes. Each session will discuss one paper or chapter and the crediting students will take turns in presenting and leading the discussion. The auditing students can volunteer to present, but it is not mandatory. In addition to the papers chosen for discussion in a session, instructors may assign background readings and activities, at instances where they deem it relevant. The presentation and

discussion have to be structured in such a way that maximum participation from all the participants is ensured and thereby discussion among them is enabled.

Assessment will be based on the following accounts:

- 1) Presentation of papers
- 2) Participation in discussion

3) Two term papers - a mid term and a final term paper. The topic of mid-term paper will be assigned by the instructors and the expected length is around 2000 words. It will have half the weightage in score compared to the final term paper, whose expected length is 4000 -5000 words. For the final term paper students can choose a theme, in consultation with instructors, that they are interested in and is likely to work in future.

## **Readings:**

## Theme 1: Education and Society

- Greer, B. (2011). What is Mathematics Education for? In K. Subramaniam & A. Majumdar (Eds.) epiSTEME 3 *Proceedings of the International Conference to Review Research in Science, Technology and Mathematics Education*. MacMillan.
- Raina, D. (2011). Institutions and Knowledge: Framing the Translation of Science in Colonial South Asia. *Asiatische Studien/Etudes Asiatiques*, 65(4), 945-967.
- Rampal, A. (2008). Scaffolded participation of children: perspectives from India. *The International Journal of Children's Rights, 16(3), 313-325.*
- Hodson, D. (2003) Time for action: Science education for an alternative future. *International Journal of Science Education*, Vol.25, Issue 6. pages 645-670.
- K. Krishna (2010). Culture, state and girls: An educational perspective. *Economic and Political Weekly*, Vol 45, Issue No. 17, April 24, 2010.
- Spencer, S. J., Steele, C. M., & Quinn, D. M. (1999). Stereotype threat and women's math performance. Journal of experimental social psychology, 35(1), 4-28.

## Theme 2: Out-of-school and connections to real world

- Allchin, D. (1999). Values in Science: An educational perspective, Science & Education, 8, 1-12.
- Braund, M. & Reiss, M. (2006). Towards a more authentic science curriculum: The contribution of out-of-school learning, *International Journal of Science Education*, 28(12), 1373-1388.
- Raveendran, A., & Chunawala, S. (2015). Values in science: making sense of biology doctoral students' critical examination of a deterministic claim in a media article. *Science Education*, *99*(4), 669-695.
